PROFESSIONAL EXPERIENCE

BNY Mellon

December 2024-Present

Software Engineer

- Architected core frontend and backend systems for ALT'S BRIDGE, a middle-man platform streamlining alternative-investment workflows, building backend FastAPI services that reduced investment time from months to days, saving millions in overhead yearly.
- Engineered asynchronous data-parsing scripts and synchronous DAGs to process 300+ data pipelines, automating manual workflows and cutting hours of manual processing to minutes, saving thousands of hours and 1M+ yearly.
- Pushed for AI tooling integration across the team and developed workflow automations for code development and review, allowing individuals to achieve ticket completion 2-3x faster, allowing us to achieve yearly backlog in a quarter.

Conference Catalysts

May 2022 - July 2024

Software Engineer

- Designed a full-stack Laravel application enabling 50+ non-technical employees to interact with project data through a self-service interface, eliminating 20+ hours per week of engineering support requests (equivalent to 300K + yearly).
- Refactored a large-scale, frequently-run PHP data parser, boosting processing speeds by roughly 1000% (~10x) and reducing 20 minute report generation to 45 seconds, saving 20+ hours weekly (equivalent to 300K+ yearly).

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C#, C++, C, PHP

Front-end: HTML, CSS, Next, Nuxt, Vue, React, Tailwind, Drupal, Angular

Back-end: FastAPI, GraphQL, Django, Laravel, Express, NodeJS, Spring Boot

Databases: SQL, MongoDB, Supabase, Cloud Storage

Cloud and DevOps: AWS, Docker, Gitlab (CI/DD), Kafka

AI: Pytorch, Claude Code, Agentic Programming, n8n, Linear, RAG, Vector Embedding

PROJECTS

Conductor - AI Automated Coding Assistant

- Enhances Claude Code to automate the development workflow, multiplying productivity with less human input.
- Breaks epics into Linear tickets, dispatches sub-agents to implement them, and runs Code Review Agents that resolve issues before human review.
- Detects failures and auto-dispatches an investigation agent that diagnoses the issue and submits a fix via PR.

RoomRadar — AI Assisted Hospitality Scouter

- Developed an autonomous web scraping agent that scrapes nearby Airbnb and hotel data and extrapolates unstructured data into structured data i.e. location ratings, surfacing ranked travel recommendations for any given area.
- Structured incomplete data by passing into a reasoning model to interface with external API's not necessary available to web scrapers.

Kime — AI/ML Martial Arts Trainer

- Developed a computer vision pipeline using VLM's to perform classification and analysis on martial arts techniques.
- Tracks technique trends across a user's submissions to pinpoint recurring flaws and suggest specific corrective drills.

Querious — Advanced Querying Chatbot

- Developed an LLM chatbot with RAG-based context management over internal docs (PDFs, markdown files, etc) to answer website and business-operations questions.
- Added tool-calling so the LLM can fetch information on the user's behalf, even from non-API sources, filtered for sensitive information.

EDUCATION

University of Florida

Bachelor of Science in Computer Engineering

Orlando, FL

2022

OUTSIDE ORGANIZATIONS

Boy Scouts of America

Eagle Scout

Orlando, FL

2017
